

variable speed drive ATV32 - 1.5 kw - 200 V - 1 phase - with heat sink

ATV32HU15M2

! Discontinued on: Jan 23, 2021

Main

Range Of Product	Altivar 32
Product Or Component Type	Variable speed drive
Product Destination	Asynchronous motors Synchronous motors
Product Specific Application	Complex machines
Function Available	-
Assembly Style	With heat sink
Component Name	ATV32
Emc Filter	Class C2 EMC filter integrated
Phase	1 phase
[Us] Rated Supply Voltage	200240 V - 1510 %
Supply Voltage Limits	170264 V
Supply Frequency	5060 Hz - 55 %
Network Frequency	47.563 Hz
Motor Power Kw	1.5 kW 200240 V
Maximum Horse Power Rating	2 hp 200240 V

Mounting and Clearance

Mounting and Clearance

- (1) Minimum value corresponding to thermal constraints. A 150 mm clearance may help to connect the ground.
- (2) Optional GV2 circuit-breaker

Option: Protection Device, GV2 circuit-breaker

The drive is prepared to be equipped with an optional GV2 circuit-breaker.

The GV2 circuit-breaker is directly mounted on the drive. Mechanical and electrical link are made using the optional adapter. The options are supplied with detailed mounting instruction sheet.

NOTE: The product overall dimension, including GV2 adapter and EMC plate mounted, becomes 424 mm (16.7 in.)

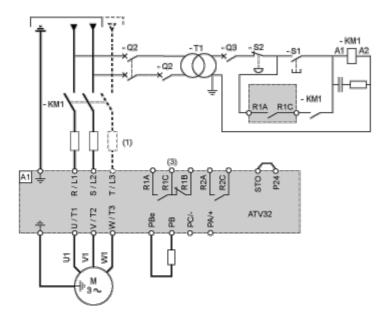

(1) Ground screw (HS type 2 - 5x12)

Diagram with Preventa Safety Module (Safe Torque Off Function)

ATV32HU15M2

Connection diagrams conforming to standards EN 954-1 category 3 and IEC/EN 61508 capacity SIL2, stopping category 0 in accordance with standard IEC/EN 60204-1.

When the emergency stop is activated, the drive power supply is cut immediately and the motor stops in freewheel, according to category 0 of standard IEC/EN 60204-1.

A contact on the Preventa XPS AC module must be inserted in the brake control circuit to engage it safely when the STO (Safe Torque Off) safety function is activated.

- (1) Line choke (if used)
- (2) It is essential to connect the shielding to the ground.
- (3) Fault relay contacts, for remote signaling of drive status

The STO safety function integrated into the product can be used to implement an "EMERGENCY STOP" (IEC 60204-1) for category 0 stops.

With an additional, approved EMERGENCY STOP module, it is also possible to implement category 1 stops.

STO function

The STO safety function is triggered via 2 redundant inputs. The circuits of the two inputs must be separate so that there are always two channels. The switching process must be simultaneous for both inputs (offset < 1 s).

The power stage is disabled and an error message is generated. The motor can no longer generate torque and coasts down without braking. A restart is possible after resetting the error message with a "Fault Reset".

The power stage is disabled and an error message is generated if only one of the two inputs is switched off or if the time offset is too great. This error message can only be reset by switching off the product.

Diagram without Preventa Safety Module

Connection diagrams conforming to standards EN 954-1 category 2 and IEC/EN 61508 capacity SIL1, stopping category 0 in accordance with standard IEC/EN 60204-1.

The connection diagram below is suitable for use with machines with a short freewheel stop time (machines with low inertia or high resistive torque).

When the emergency stop is activated, the drive power supply is cut immediately and the motor stops in freewheel, according to category 0 of standard IEC/EN 60204-1.

X Switching frequency

Apr 20, 2024

Above 4 kHz, the drive will reduce the switching frequency automatically in the event of an excessive temperature rise.

Technical Description

Sink / Source Switch Configuration (SW1)

The logic input switch (SW1) is used to adapt the operation of the logic inputs to the technology of the programmable controller outputs.

Switch SW1 set to "Source" position

Switch SW1 set to "Source" position and use of an external power supply for the LIs

Switch SW1 set to "Sink Int" position

Switch SW1 set to "Sink Ext" position
